

A scatter plot showing a negative linear trend. The x-axis has two data points labeled with the Greek letter ϕ . The y-axis has six data points, three of which are labeled with ϕ . A white line of best fit is drawn through the data points. The plot features a light gray background with a dark gray grid. The data points are represented by small circles with vertical error bars.

$$y = 23.2 - 1.51x \quad R^2 = 0.40$$
